XAUUSD Gold Levels Cheat Sheet

The Money Door 45° level method on one page · by Venkatesh M, Chief Trainer, Money Door FX Academy

1. The Money Door 45° Formula

Level = (√OPEN ± k)² k = 0.125, 0.250, 0.375 … 2.000

OPEN = the gold price at **the day open, 23:00 UTC** (18:00 New York time: 22:00 UTC in US summer, 23:00 UTC in US winter; the first 1-hour candle of the day on an OANDA XAUUSD chart). Take its square root, add or subtract k, and square it again. Every 0.25 step is an angle: 0.25 = 45°, 0.50 = 90°, 0.75 = 135°, 1.00 = 180°.

2. Today's Levels · Fri 27 Nov 2026

OPEN 3,566.205 · √OPEN ≈ 59.7177 (OANDA XAUUSD, 23:00 UTC)

+1.000 180°	**3,686.640**
+0.875	**3,671.477**
+0.750 135°	**3,656.344**
+0.625	**3,641.243**
+0.500 90°	**3,626.173**
+0.375	**3,611.134**
+0.250 45°	**3,596.126**
+0.125	**3,581.150**
OPEN (23:00 UTC)	**3,566.205**
−0.125	**3,551.291**
−0.250 45°	**3,536.409**
−0.375	**3,521.557**
−0.500 90°	**3,506.737**
−0.625	**3,491.948**
−0.750 135°	**3,477.191**
−0.875	**3,462.465**
−1.000 180°	**3,447.770**

3. How to Read the Levels

- **+0.250 (45°)** above the open = key resistance. **−0.250 (45°)** below = key support.
- Price between the two 45° levels = **neutral zone**. Price often moves sideways here.
- Nearest level above price and nearest level below = **the first levels to study**.
- **PC (Point of Continuation):** how price behaves when it keeps moving beyond a level. Studied step by step in the Gold Vault.
- **PR (Point of Reversal):** how price behaves when it turns away from a level. Studied step by step in the Gold Vault.
- A touch alone tells you little. **Study what price does next, on a demo chart.**

4. Session Times (UTC)

Day open (levels set)	**23:00 (evening before)**
London open	**08:00**
New York open	**13:30**
Gold most active	**13:30 – 17:00**

For Fri 27 Nov 2026. UTC times move 1 hour earlier when UK / US summer time starts.

5. Risk Education Basics

- Risk **1% or less** of your account per trade.
- Stop-loss goes beyond the next opposite level, never "mental".
- Stop for the day after **2 losing trades** or −2%.
- No new entries 15 minutes before and after **red (high-impact) USD news**.

Gold lot size
0.01 lot = about $1 per $1 move in gold.
Lot = Risk $ ÷ (Stop distance in $ × 100)
Example: $3,000 account, 1% = $30 risk, stop $10 away → 30 ÷ (10 × 100) = 0.03 lot
